| Topic: |  |  |  |
| Sequences |  |  | 4 lessons |
| Content (Intent) |  |  |  |
| Prior Learning <br> Year 9 Fibonacci \& quadratic sequences November Year 8 Linear sequences February |  | Future Learn <br> Year 10 Straight <br> Year 10 Quadratic <br> Year 13 <br> Pure Chapter 3 | ing <br> line graphs February tic graphs March <br> Sequences and Series |
| - Recognise, generate, extend and describe sequences including triangular, square and cube numbers, arithmetic, geometric, quadratic and Fibonacci-type sequences: <br> - Find and use the nth term of an arithmetic sequence to generate terms, identify which terms can/cannot be in a sequence <br> - Find and use the nth term of a quadratic sequence to generate terms, identify which terms can/cannot be in a sequence (simple versions only e.g. is 108 in the sequence $3 n^{2}+8$ ?) <br> - Solve problems involving sequences from real life situations (including geometric sequences). |  |  |  |
| Pedagogical notes (implementation) |  | How will under assessed \& rec | rstanding be corded (Impact) |
| Emphasise use of $3 n$ meaning $3 \times n$. <br> Students need to be clear on the description of the pattern in words, the difference between the terms and the algebraic description of the $n$th term. <br> Finding the $n$th term of a quadratic sequence by halving the second difference to find the coefficient of $n^{2}$. |  | End of half term <br> End of Year Moc <br> How can paren <br> MathsWatch clip <br> GCSE <br> $37,102,103$ <br> $104,141,163,21$ | Assessment in Dec cks in April <br> nts help at home? <br> ps (Qualification |
