

Subject	Year	Month	
Mathematics	7	November	
Topic:			
ORDERING INTEGERS, DECIMALS AND FRACTIONS			6 LESSONS
Content (Intent)			
Prior Learning KEY STAGE 2 <ul style="list-style-type: none"> Know the meaning of $<$, $>$ and $=$ Know the definition of the term integer Understand that negative numbers are numbers less than zero Order a set of decimals with a mixed number of decimal places (up to a maximum of three) Know how to find equivalent fractions Know how to change a mixed number to an improper fraction Know how to simplify a fraction by cancelling common factors 		Future Learning <ul style="list-style-type: none"> Y8 : FDP converting and multiplier method Y9 : Solving inequalities Y10 : Inequalities 	
Objectives <ul style="list-style-type: none"> Use the signs $<$, $>$, \leq, \geq and $=$ to compare numbers, including three or more numbers Order a set of integers Order a set of decimals Order fractions with <ul style="list-style-type: none"> the same numerator the same denominator denominators are a multiple of each other denominators are not multiples of each other Order mixed numbers and fractions Order a combination of integers, decimals, fractions and mixed numbers 		For teaching purposes Possible Questions: <ul style="list-style-type: none"> Jenny writes down $0.400 > 0.58$. Kenny writes down $0.400 < 0.58$. Who do you agree with? Explain your answer. Find a fraction which is greater than $\frac{3}{5}$ and less than $\frac{7}{8}$. And another. And another ... Convince me that $-15 < -3$ Possible Misconceptions: <ul style="list-style-type: none"> may believe that 0.400 is greater than 0.58 may believe, incorrectly, that: <ul style="list-style-type: none"> A fraction with a larger denominator is a larger fraction A fraction with a larger numerator is a larger fraction A fraction involving larger numbers is a larger fraction may believe that -6 is greater than -3. 	
Pedagogical notes (implementation)		How will understanding be assessed & recorded (Impact)	
<ul style="list-style-type: none"> Zero is neither positive nor negative. The set of integers includes the natural numbers $\{1, 2, 3, \dots\}$, zero (0) and the 'opposite' of the natural numbers $\{-1, -2, -3, \dots\}$. <p>Pupil must use language correctly to avoid reinforcing misconceptions:</p> <ul style="list-style-type: none"> 0.45 should never be read as 'zero point forty-five' $5 > 3$ should be read as 'five is greater than 3', not 'bigger than'. <p>Ensure that pupils check the required order (smallest or greatest first.)</p> <p><i>'negative number'; not minus. Starting good habits so in later stages "calculating with negatives" will be less of a challenge.</i></p>		End of term Assessment in February End of Year Assessment in June/July <hr/> How can parents help at home? MathsWatch clips (Qualifications KS3) N2a N2b N34
