

Subject	Year	Month	
Mathematics	7	January	

Topic:

ANGLE FACTS AND PROPERTIES OF 2D SHAPES 5 LESSONS

Content (Intent)

<p>Prior Learning</p> <p>KEY STAGE 2</p> <ul style="list-style-type: none"> Know that vertically opposite angles are equal Know that angles on a straight line add up to 180° Know that angles about a point add up to 360° Types of triangles Types of quadrilaterals <p>PREVIOUS UNIT:</p> <ul style="list-style-type: none"> parallel, perpendicular notation for equal sides, parallel sides, right angles 	<p>Future Learning</p> <p>y8</p> <p>Bearings (in which bearing of A from B vs. B from A might or might not have been mentioned)</p> <p>y8</p> <p>Angles on Parallel lines</p> <p>Angles in polygons</p>
--	--

<p>Objectives</p> <p>Recognise and solve problems using ...</p> <ul style="list-style-type: none"> vertically opposite angles angles at a point, on a straight line (COVERED IN KS2) angles in a triangle (COVERED IN KS2) Know and solve problems using the properties and definitions of triangles Know and solve problems using the properties and definitions of special types of quadrilaterals (including diagonals) Line symmetry in 2D shapes 	<p>For teaching purposes</p> <p>POSSIBLE QUESTIONS</p> <ul style="list-style-type: none"> Show me an example of a trapezium. And another ... Which quadrilaterals are special examples of other quadrilaterals? Why? Can you create a 'quadrilateral family tree'? What is the same and what is different: Rhombus / Parallelogram? Show me possible values for a and b. And another. <div style="text-align: right;">  </div> <p>POSSIBLE MISCONCEPTIONS</p> <ul style="list-style-type: none"> may think that all trapezia are isosceles or have one right angle may think that a diagonal cannot be horizontal or vertical may think that a 'non-horizontal' square is called a diamond The equal angles of an isosceles triangle are not always the 'base angles' Calculating mistakes when adding/subtracting mentally. E.g $180 - 127 = 63^\circ$.
--	---

Pedagogical notes (implementation) **How will understanding be assessed & recorded (Impact)**

<p>Notation</p> <p>Dash for equal lengths</p> <p>Arc for equal angles</p> <p>Right angle notation</p> <p>Parallel line arrow heads</p> <p>Make the connection between the SUM of the angles in a triangle and the SUM of angles on a straight line by drawing any triangle, rip off the corners of triangles and fitting them together on a straight line. (The official proof will be discussed in Year 8, using angles on parallel lines.)</p> <p><i>The word 'isosceles' means 'equal legs'. What do you have at the bottom of equal legs? Equal ankles!</i></p> <p>Kite, not 'diamond', A square is a rectangle with extra features.</p> <p>A rhombus is a parallelogram with extra features</p>	<p>End of term Assessment in February</p> <p>End of Year Assessment in June / July</p> <p>BAM task 5 – Geometric notation</p> <p>How can parents help at home?</p> <p>MathsWatch clips (Qualification KS3)</p> <p>G1, G13, G14, G16, G17</p>
