Mathematics	9	September	
Topic:			
INDICES, ROOTS, STANDARD FORM, ERROR INTERVALS			10 LESSONS
Content (Intent)			
<p>Prior Learning</p> <p>Y7</p> <ul style="list-style-type: none"> • Powers & Roots • Round to decimal places or significant figures • Know the meaning of the symbols $<$, $>$, \leq, \geq (more of this coming in January) <p>Y8</p> <ul style="list-style-type: none"> • Intro to standard form • laws of indices 	<p>Future Learning</p> <p>Solving indices problems involving different bases Using bounds in relation to SDT and density/pressure problems</p>		
<p>Objectives</p> <ul style="list-style-type: none"> • Calculate with positive indices (the index laws) • Calculate with roots and fractional powers • HIGHER Calculate with negative indices in the context of standard form • Use a calculator to evaluate numerical expressions involving powers and roots • Apply the four operations in calculations using standard form • Use standard form on a scientific calculator including interpreting the standard form display of a scientific calculator • Understand the difference between truncating and rounding • Identify the minimum and maximum values of an amount that has been rounded (to nearest x, x d.p., x s.f.) (lower bound and upper bound) • Use inequalities to describe the range of values for a rounded value (=error interval) • HIGHER Solve problems involving the maximum and minimum values of an amount that has been rounded 	<p>For teaching purposes</p> <p>Possible questions</p> <ul style="list-style-type: none"> • Kenny thinks this number is written in standard form: 23×10^7. Do you agree with Kenny? Explain your answer. • When a number 'x' is rounded to 2 significant figures the result is 70. Jenny writes '$65 < x < 75$'. What is wrong with Jenny's statement? How would you correct it? <p>Misconceptions</p> <ul style="list-style-type: none"> • may think that any number multiplied by a power of ten qualifies as a number written in standard form • may think, for example, that 6729 rounded to one significant figure is 7 • may struggle to understand why the maximum value of a rounded number is actually a value which would not round to that number; i.e. if given the fact that a number 'x' is rounded to 1 sf the result is 70, they might write '$65 < x < 74.99$' 		
Pedagogical notes (implementation)		How will understanding be assessed & recorded (Impact)	
<p>Liaise with the science department to establish when students first meet the use of standard form, and in what contexts they will be expected to interpret it.</p> <p>NCETM: Departmental workshops: Index Numbers NCETM: Glossary</p> <p>Use 'standard form', be aware it's the same as 'scientific notation' or 'standard index form'.</p> <p><i>The language 'negative number' is used instead of 'minus number'.</i></p>		<p>End of term Assessment in December End of Year Assessment in May 9BAM1 Roots and indices</p> <p style="background-color: #d9e1f2;">How can parents help at home?</p> <p>MathsWatch clips (Qualification KS3) N25, N45a, N45b</p>
