| ERROR INTERVALS 3 LESSONS |  |  |  |  |
| Content (Intent) |  |  |  |  |
| Prior Learning <br> Y7 <br> - Round to decimal places or significant figures <br> - Know the meaning of the symbols $<,>, \leq, \geq$ (more of this coming in January) |  | Future Learning <br> Using bounds with different operations and in relation to SDT and density/pressure problems |  |  |
| Objectives <br> - Recall all rounding rules <br> - Understand the difference between truncating and rounding <br> - Identify the minimum and maximum values of an amount that has been rounded (to nearest $x, x$ d.p., $x$ s.f.) (lower bound and upper bound) <br> - Use inequalities to describe the range of values for a rounded value (=error interval) |  | For teaching purposes <br> Possible questions <br> - When a number ' $x$ ' is rounded to 2 significant figures the result is 70 . Jenny writes ' $65<x<75$ '. What is wrong with Jenny's statement? How would you correct it? <br> - A number was rounded to 50 to the nearest 10 , what could my number have been? <br> Misconceptions <br> - may think, for example, that 6729 rounded to one significant figure is 7 <br> - may struggle to understand why the maximum value of a rounded number is actually a value which would not round to that number; i.e. if given the fact that a number ' $x$ ' is rounded to 1 sf the result is 70 , they might write '65 < x < 74.99' <br> - may think that the upper bound for 12.7 to $1 \mathrm{~d} . \mathrm{p}$. is 12.74 or 12.749 |  |  |
| Pedagogical notes (implementation) |  | How will understanding be assessed \& recorded (Impact) |  |  |
| Rounding to 1 s.f. is the same as determining the place value of the first significant figure and rounding to that value. <br> e.g. 234 to 1s.f. is rounding to the nearest hundred <br> 1428 to 1 s.f. is rounding to the nearest thousand <br> May want to discuss why we write 12.5 and not $12.4 \dot{9}$ as the upper bound. Could discuss the equivalence of these numbers, and the fact that we will use them for calculations later so 12.5 is preferable. |  | End of term Assessment in December End of Year Assessment in May 9BAM1 Roots and indices |  |  |
|  |  | How can parents help at home? |  |  |
|  |  | MathsWatch clips (Qualification KS3) N25, N45a, N45b |  |  |
